Species

Ball Python

---

## Max Size

---

Ball python hatchlings are approximately 10 inches in length. Adult female ball pythons average 3 to 5 feet long, and adult male ball pythons average 2 to 3 feet in size. This is a species in which mature females are typically much larger than the males. A 5-foot ball python is considered big, although lengths of 6 feet or more have been reported.

## Life Span

---

With proper care, ball pythons can live 30 years or more. The record age for a ball python is more than 40 years – so plan on a long life for your new pet snake.

## Caging

---

There are different enclosures that work well for ball pythons, including, but not limited to, plastic sweaterboxes (i.e. Rubbermaid), melamine racks and any of the commercially available, plastic-type reptile cages.

## Heating & Lighting

---

Provide your ball python with a basking spot temperature of 88 to 96 degrees Fahrenheit and an ambient temperature of 78 to 80 degrees. The ambient temperature should not fall below 75 degrees.

## Substrate

---

Newspapers and paper towels are the cheapest and easiest substrates for ball pythons with regards to cleaning and disinfecting – out with the old, in with the new. Cypress mulch and orchid bark are great substrates for controlling humidity, but remember that too much humidity can be as detrimental (if not more) as too little. Never use any substrate containing cedar, as it contains oils that can be deadly to reptiles! Avoid sand, shavings and peat bedding.
